

Hardware for the project JACOBI
Group 3: Quentin, Thomas, Robin et Karine

We would like to use a monitor with a micro-computer, because we would use a specific device to display our website without the possibility of using our screen for other things.

Our model of monitor:

[\[monitor/Fnac\]](#)

[\[Monitor/Amazon\]](#)

Our model of micro-computer:

[\[PC\]](#)

Product	Price
2*iiyame Prolite	2*789€ = 1578€
2*mini PC windows	2*139€ = 278€

TOTAL: 1856€ ttc

First, we were looking for a Raspberry Pi, but due to the delivery problem, we searched for an alternative. We chose The mini PC windows because they are cheap and compatible with our project, they are able to display our website in good condition of security and quality. We chose the iiyame Prolite because they are cheap and of good quality.
